

PROFILE

Backend Software Engineer with 3+ years of experience building scalable, secure, and distributed systems using Node.js. Experienced in designing high-performance APIs, implementing authentication and secure communication (mTLS, encryption), and optimizing backend services for reliability and scalability. Strong foundation in web fundamentals, distributed systems, and cloud-native architectures, with a focus on performance, observability, and engineering excellence.

Work Experience

Kore.AI
Hyderabad

Sep 2022 - Present

Software Engineer

Jan 2024 - Present

- Designed and developed scalable backend services and microservices for enterprise SaaS platforms, ensuring high performance and reliability.
- Built secure API communication using mutual TLS and encryption, while optimizing system performance through Redis caching and architectural improvements.
- Worked on distributed systems handling high-volume API traffic, ensuring low latency and system resilience.
- Implemented observability using OpenTelemetry and resolved production issues, improving monitoring, debugging, and system stability.
- Owned end-to-end development from design to deployment, including CI/CD pipelines and release management.
- Collaborated with cross-functional teams, participated in code reviews, and optimized memory and performance in Node-RED-based systems.

Associate Engineer

Sep 2022 - Dec 2023

- Developed backend modules for third-party API integration platform.
- Worked on request mapping engines and REST API execution layers.
- Resolved production incidents and improved system reliability.
- Collaborated in code reviews and contributed to engineering best practices.

Education

ACE Engineering College

BTech in Electronics & Communication

Graduated with a GPA of 7.3

Hyderabad

2019 - 2023

Skills

- **Languages:** Node.js, JavaScript, TypeScript, Python
- **Backend & APIs:** REST, SOAP, Express.js, Microservices Architecture
- **Databases:** SQL (PostgreSQL, MongoDB queries), Data analysis, API data handling
- **DevOps & Cloud:** Docker, CI/CD (Git-based pipelines), AWS, Azure
- **Systems Knowledge:** Linux fundamentals, networking basics (TCP/IP, HTTP), performance debugging
- **Analytics & Visualization:** OpenTelemetry, Logging, Production Debugging, Power BI, Tableau (basic), Data visualization concepts
- **Other:** Release Management, Agile, Distributed Systems Concepts
